Full-time summer field technicians are wanted for forest ecology research

Successful applicants will work on a project that examines the tree regeneration dynamics of ash-heavy northern hardwood forests following partial harvesting. The study has sites near Levering and Goodhart in Emmet County, just south of the Mackinac Bridge in the northern Lower Peninsula of Michigan.

Housing will be provided.

Applicants must enjoy spending long hours outside, be capable of exerting moderate physical activity and show attention to detail in data collection.

Following the summer, part-time lab work will be available.

Examples of tasks include data entry, and post-field processing of hemispherical canopy photographs and seedling growth data. No previous experience is required, but the tasks require precision and attention to detail.

If you are interested please send a resume, including references, and a cover letter to Mike Walters at mwalters@msu.edu.
