Cornell University's Department of Plant Pathology and Plant-Microbe Biology in Geneva, New York, once again is offering a Summer Research Scholars Program where undergraduate students can participate in research projects within the discipline of plant pathology and plant-microbe biology.

I am asking if you would please print and post the attached pdf where undergraduate students would take notice of it, and where appropriate, forward this email to faculty that lecture advanced plant science, microbiology, agronomy, horticulture, etc. courses that they might bring this to the attention of their students (preferably those in their junior year).

The Internship is 8 weeks (June 1, 2011 and runs through July 26, 2011) and provides a stipend of \$4,000, plus other benefits. Details may be found at <http://www.scholars.pppmb.cals.cornell.edu/>

Thank you very much for posting.
