I am looking for a student to help me with a small to mid-size project which includes the following:

Design and plant low maintenance plants in a garden space that runs along side of a garage. The space is approximately 3 feet deep by 24 feet wide.

Primary objectives are:
1) Screen/hide a satellite dish (approx. 5 ft. tall) using green or hardscape material.
2) Use low maintenance, compact plantings that will not overgrow the space.
3) Have a final design that is creative and eye catching (as opposed to “the expected”).

Design Preferences:
I prefer a design that is "sculptured" with contrasting texture and varigated greenery. I am not interested in vivid color or lots of flowers. I need to be able to see weeds come up in between plantings and would not like a "flower bed”. Something more contemporary (but not formal) is preferred.

My location is NE side of Lansing. I am very negotiable on price.
