Dr. Karen Cichy, USDA dry bean geneticist, is looking to hire 2 undergraduate students this summer starting in June to work in the Dry Bean Food Quality Genetics Lab. One position would be lab based and would involve preparation and analysis of dry bean seed cooking time and phytic acid content. The second position is field based and would involve weeding, sampling and data collection in two field locations.

No specific experience is required for either position, although we prefer to hire students with an interest in agronomy, plant science and/or plant breeding and genetics.

If you are interested in either the lab or the field position, please email Dr. Cichy at Karen.Cichy@ARS.USDA.GOV and attach your resume. Include in your cover email your interest in the position.
