MSU's Vegetable Entomology Lab - Summer Positions

We have two openings for summer undergraduates in the MSU vegetable entomology lab. The positions start in May and end in August, 40hrs/week, $9/hr. The research we work on covers many areas of agricultural ecology, and requires an ability to work outside during the summer months. You'll spend about half of your time doing fieldwork, which for example means that you'll learn to identify insects on different vegetables and replace insect traps. The other half of your time will be spent in the lab, where you'll help with maintaining insect cultures and grow plants. You'll be involved in many different projects to maximize your ability to learn through this work experience. We look for people with a passion for biology and the outdoors.

Please send your CV and a brief cover letter to Zsofia (szendrei@msu.edu) if you are interested in applying.
